

MX2500

SMALL footprint, **BIG Benefits**

The MX2500 power unit provides powerful central vacuum performance with a smaller footprint at an affordable price.

Powerful, Consistent Cleaning Performance

The MX2500 provides the power needed to remove 100% of all vacuumed dirt from a home, keeping it from recirculating back into the air you breathe and improving your allergy symptoms! With more power than uprights, MX2500 makes whole-house cleaning fast, convenient and effortless.

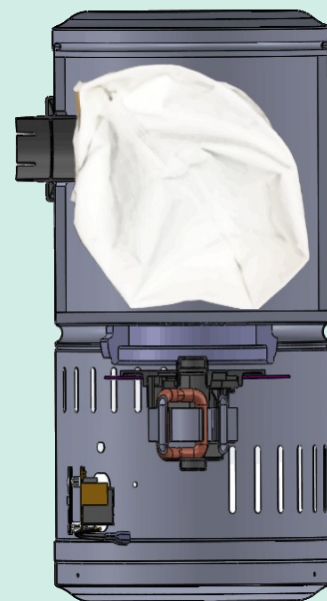

Space-Saving, Compact Size

Just 20" tall with a 10" diameter, the MX2500 is perfect for condos and apartments since its space-saving size maximizes your closet, garage or basement space where it's installed. Plus it's extremely quiet, has an attractive textured powder-coated finish, and offers convenient top-loading, dirt-free technology.

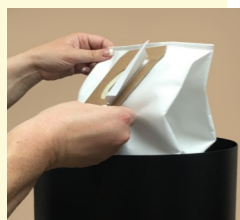

Dirt-Free Technology for Cleaner, Healthier Homes

The MX2500 unit is a top-loading replaceable filter bag unit that uses a 3-gallon CleanShield® filter bag to seal in the dirt for easy disposal – there's no bucket to empty! That means vacuumed dirt is transported directly to the bag, so you never come in contact with dirt, allergens or debris! To replace the filter bag (about 4 times a year), simply lift the lid, remove the bag, seal in the dirt with an attached adhesive tab, then insert a new bag (see photos at right). The CleanShield® filter bag, plus a permanent secondary filter, provides dual filtration and improves indoor air quality for cleaner, healthier living. *A pack of 3 filter bags is sold separately.*

MX2500 is backed by a 3-year warranty, adds to your home's resale value, and is manufactured by H-P Products in Ohio.
